Good Resumes Get Rejected Before a Human Sees Them

Most companies use a computer program (called an ATS) to read resumes first, before any person looks at them. This program throws away many good resumes just because of small mistakes, like wrong formatting, missing sections, or missing keywords.

The AI Resume Analyzer Platform exists to help students and job seekers in Bangladesh fix this problem. A resume and a target job post get uploaded, and the tool returns a score along with easy-to-understand tips for improvement.

75%

of good candidates get rejected by these computer filters, just for small formatting or keyword problems.

Made for students & job seekers in Bangladesh

OBJECTIVE

What This Project Aims to Do

Smart Matching

Build a system that checks how well a resume matches the job it's being sent for.

Clear Score

Give every resume a simple score from 0 to 100, so users know exactly where they stand.

Easy-to-Read Feedback

Split the feedback into four simple parts: Writing Style, Content Quality, Layout, and Skills Match.

Find Missing Skills

Automatically spot keywords and skills missing from the resume that the job post is asking for.

Track Your Progress

Let users safely save their past resumes and see how their score improves over time.

Three Simple Layers Working Together

The heavy work — reading PDFs, checking text, and talking to AI — all happens safely on our server, not on the user's device.

What the App Can Do For You

Instant Resume Score

Get A score out of 100 right away, showing how well a resume matches the job.

Smart AI Suggestions

The resume gets read closely by AI, with exact fixes suggested.

Feedback in 4 Simple Parts

Results split into Writing Style, Content, Layout, and Skills — easy to follow.

Personal Dashboard

A simple home screen showing all past resumes, scores, and target jobs in one place.

Side-by-Side Review

The resume appears on one side, with AI feedback and charts on the other.

Keeping Things Easy, Fast, and Safe

Progress Tracking

Old and new resumes get compared side by side, with score improvement visible over time.

Quick Resume Preview

Every uploaded PDF gets a small picture preview for quick checking.

Easy File Upload

Drag-and-drop upload, with no complicated steps needed.

Safe Login System

Only logged-in accounts can access their own resumes and data — private and secure.

Data Storage

All resumes and scores get safely stored for return access anytime.

Three Actors Make the App Work

User (Job Seeker)

The main person using the app. Uploads a resume, picks a job, and checks the feedback.

AI System

The smart helper that reads the resume and job post, then sends back a score and tips.

Admin

Looks after the app behind the scenes — manages accounts and checks everything is working well.

What Happens During a Resume Upload

Before this works: login is required, and the file must be under 20 MB.

If Something Goes Wrong

Wrong File Type

If it's not a PDF, the upload is stopped right away, with a clear error message shown.

AI Takes Too Long

If no reply comes within 15 seconds, another attempt happens automatically before a friendly message appears.

Four Sprints Across 8 Weeks

Helping Every Job Seeker Build a Better Resume

Our AI Resume Analyzer Platform brings together a friendly website, a secure server, and smart AI to give every job seeker a clear, simple way to improve their resume and get noticed.
